Hi Ross,

I just spoke with Kathy, who confirmed the locations of our split samples were stated correctly in the report. So my comment on that is resolved.

Thanks,  
Sara

Hi Ross and all,

I've taken a look at the report and have the following comments:

- The current residential screening level for the types of PCBs at this site is 0.23 ppm (not 0.24 ppm). Please edit the tables and text to reflect this.
- Please wait to finalize until Kathy confirms that the info about our split sampling, such as the locations of our congener samples, is correct.
- I may have mentioned on the call that my colorblindness makes the yellow and light green of the symbols on the figures look the same. This means that the symbols look too similar to be useful. Please change the symbols, ideally so they would look very different from each other if printed in black & white.

Please let me know if you have any questions.

Happy holidays!

Best regards,

Sara

Maryam,

Attached is the report presenting the results of the November 2015 soil sampling effort at the former Riverside Agricultural Park.

Respectfully,

Ross Surrency, PG
